

Effects of the UV(A) light on chemical reactions at the interface metal oxide / aqueous solution

To the department of chemistry
of Universidad Nacional de San Martín
for the award of the degree

Doctora en Ciencia y Tecnología
Mención Química

Dr. presented dissertation
of

Lic. Cecilia Beatriz Mendive

Scientific Advisors: Prof. Dr. Miguel Ángel Blesa, Prof. Dr. Detlef Bahnemann
and Prof. Dr. Thomas Bredow

Contents

1	Introduction	7
2	Materials	11
2.1	<i>Oxalic acid – Model adsorbant</i>	11
2.1.1	<i>General</i>	11
2.1.2	<i>Solid phase</i>	11
2.1.3	<i>Gas phase</i>	12
2.1.4	<i>In aqueous solution</i>	14
2.2	<i>TiO₂ nanoparticles</i>	18
2.2.1	<i>General</i>	18
2.2.2	<i>Crystalline structure and particles properties</i>	18
2.2.3	<i>Surface structure</i>	21
2.2.4	<i>Surface charge in water. Amphoteric property of TiO₂</i>	30
2.2.5	<i>Surface OH exchangeable groups. Adsorption sites in aqueous phase</i>	32
3	TRMC measurements	37
3.1	<i>Theoretical Background</i>	37
3.1.1	<i>Charge carriers</i>	38
3.1.2	<i>The complex permittivity or conductivity</i>	40
3.2	<i>Principle</i>	41
3.3	<i>Experimental procedures</i>	42
3.3.1	<i>The equipment</i>	42
3.3.2	<i>The sample holder</i>	43
3.3.3	<i>Sample treatment</i>	44
3.3.4	<i>Attenuation of the incident laser beam</i>	44
3.4	<i>Results and discussion</i>	45
3.4.1	<i>Charge carrier dynamics in anatase, rutile and mixed phases</i>	45
3.4.2	<i>Charge carrier dynamics in the presence of adsorbed oxalic acid</i>	47
3.4.3	<i>Influence of the laser intensity on the TRMC signal</i>	52
4	ATR-FTIR Spectroscopy – General	56
4.1	<i>History and Principles</i>	56
4.2	<i>Equipments and experimental procedures</i>	60
4.2.1	<i>Spectrometer</i>	60

4.2.2	<i>UV(A) Illumination unit</i>	61
4.2.3	<i>Analytical instrumental</i>	62
4.2.4	<i>The preparation of the TiO₂ particles layer</i>	63
5	<i>ATR-FTIR Spectroscopy – Dry TiO₂ particles layer</i>	64
6	<i>ATR-FTIR Spectroscopy – Batch Cell Reactor (BCR)</i>	69
6.1	<i>Adsorption and Photocatalytic Experiments</i>	69
6.2	<i>Results and Discussion</i>	70
6.2.1	<i>Adsorption studies in dark conditions</i>	70
6.2.2	<i>UV(A) illuminated TiO₂-oxalic acid interfaces</i>	72
7	<i>ATR-FTIR Spectroscopy – Flow Cell Reactor (FCR)</i>	84
7.1	<i>Adsorption and Photocatalytic Experiments</i>	84
7.2	<i>Results and Discussion</i>	88
7.2.1	<i>Studies in dark conditions</i>	88
7.2.1.1	<i>Adsorption and desorption</i>	88
7.2.1.2	<i>Adsorption experiments as a function of the BET surface area</i>	95
7.2.1.3	<i>Studies of TiO₂ surfaces during long periods of darkness</i>	96
7.2.2	<i>Studies of the UV(A) illuminated anatase and rutile interfaces</i>	99
7.2.2.1	<i>Monitoring the surface of the TiO₂ nanoparticles</i>	99
7.2.2.2	<i>Possible intermediates</i>	107
7.2.2.3	<i>Intermittent periods of darkness and UV(A) illumination</i>	108
7.2.2.4	<i>Monitoring the supernatant solution above the TiO₂ nanoparticles</i>	110
8	<i>Quantum Chemical Calculations</i>	115
8.1	<i>Theoretical Background</i>	115
8.2	<i>Semiempirical method MSINDO</i>	117
8.3	<i>Molecular Dynamics Simulations</i>	121
8.4	<i>Results and discussion</i>	126
8.4.1	<i>Bulk properties of anatase and rutile</i>	126
8.4.2	<i>Anatase (100) and rutile (110) surfaces</i>	128
8.4.3	<i>Chemisorption of water onto TiO₂</i>	130
8.4.4	<i>Adsorption of oxalic acid on bare surfaces</i>	132
8.4.5	<i>Adsorption of oxalic acid on hydrated surfaces</i>	137
8.4.6	<i>Adsorption of oxalic acid in a bulk water system</i>	145
8.4.7	<i>FTIR spectra simulation and spectral</i>	147

8.4.8	<i>Band assignment</i>	150
8.4.9	<i>Scaling factor</i>	153
8.4.10	<i>Oxalic Acid in solution</i>	155
8.4.11	<i>MSINDO -MD spectra of the most stable surface complexes</i>	156
9	<i>Comparison of Theoretical and Experimental Results</i>	161
9.1	<i>Surface speciation in equilibrium in the dark</i>	161
9.2	<i>UV(A) induced surface speciation changes</i>	171
9.3	<i>Configuration Interaction calculations</i>	177
9.3.1	<i>General</i>	177
9.3.2	<i>Rutile (110)</i>	179
9.3.3	<i>Anatase (100)</i>	186
10	<i>Summary</i>	196
